St Vincent and the Grenadines e-Government Development Strategy Plan

St Vincent and The Grenadines

E-Government

Definitions of Data:

N/A

Main Focus of Document:

Outlines the Government's intention to transform current services electronically

Target Beneficiaries or Sectors:

government, citizens

Key Elements:

The tasks identified in the roadmap are as follows: ● Enhance the portal content and integrate the intranet portal ● Continuously develop the e-government domain services with the current pace ● Start to identify the law, regulation and process rules of e-document service in government ● Develop the e-document archiving system as a pilot run ● Start to plan the e-payment solution and invite financial organization such as banks for discussion ● Start to collect and clear government employees' data ● Start to collect the requirements and allocate resources for the office automation service

The major purpose in this phase is to develop more e-government services as well as to extend the services to more government agencies. The aim is to enhance the penetration of e-government services in government agencies. In this phase, work will be done to prepare to address integration and data exchange issues. The major tasks in this phase are as follows: ● Enhance the portal content, online services in national portals and enhance the functions in intranet portals ● Enhance e-government services and start to plan for integration and exchange issues ● Start to plan and analyze the overall architecture of the centralized account registration and directory service ● Start to plan and analyze the overall architecture of the centralized authentication and authorization service ● Develop an e-document editing system for a pilot run and plan the e-document exchange system
